Technical Skills

Languages: C, C++, Javascript, Typescript, MYSQL, Java, HTML, CSS
Technical Skills: System Design, Data Structures, Algorithms, REST API
Technologies/Frameworks: Node.js, MySQL, MongoDB, GIT, Docker, AWS, SpringBoot

Experience

Per Annum

May 2022 – Present

Software Development Engineer -2

New Delhi

- **Monolith to Microservices Architecture:** Refactored a legacy monolithic system into 6+ scalable TypeScript-based microservices, improving code maintainability by 60% and deployment speed by 40%. Allowed seamless inter-service communication using internal SDK clients and containerized all services for consistent and efficient deployments.
- **Cross-System Webhook Architecture (AWS):** Established an event-driven webhook system using AWS SNS, SQS, API Gateway, and Step Functions. Enabled real-time syncing of admin-level changes across 5+ databases and apps owned by different parent entities with 99.99% uptime and fault tolerance.
- **Company Admin Platform – Full Backend Ownership:** Planned, created, deployed, and maintained a Company Admin system from scratch. Served as sole backend owner and primary point of contact, ensuring on-time delivery, SLA compliance, and 24/7 system stability.
- **Foreclosure, Disbursement, Loan cancellation & Repayment for 1.5M+ Borrowers** Developed core backend workflows for loan foreclosure, disbursement, cancellation, and repayment, ensuring 100% data consistency. Devised Redis-based locking and atomic transaction management to ensure consistency and zero race conditions.
- **Automated Credit Scoring & Document Workflows:** Built decoupled AWS SQS-based services for CIBIL score fetch, loan agreement creation, and KFS document delivery. Processed 5,000+ borrower profiles/day, achieving 99% success rate in document generation.
- **Investor Payout & Smart Reinvestment Engine:** Engineered a Rs.5 Cr+ daily transaction engine for investor repayments and reinvestment via mandate-based bank pulls. Aligned payouts with borrower collections, increasing reinvestment efficiency by 35%. Also, reduced the payout processing time from 10 hours to 2 hours using SQL partitioning.
- **Centralized Notification System:** Created and implemented a scalable notification system supporting email, WhatsApp, and SMS using Karix and Gupshup, handling 100K+ messages/month across all projects. Unified notifications across all projects and optimized performance by introducing a server-worker model with MongoDB, enabling asynchronous and faster message processing.
- **Mass Loan Correction Without Downtime:** Executed bulk correction of 700,000+ loan records using asynchronous batch jobs and background processing pipelines. Maintained 100% system uptime during fixes while ensuring data accuracy and compliance.
- **SIP (Systematic Investment Plan):** Designed and implemented a comprehensive SIP system with support for daily auto-debits, including options to skip a month, cancel mandates, and change pull dates, ensuring 99.9% success rate
- **Partner Integrations with Leading Fintech Players:** Led end-to-end backend integrations with top fintechs including MobiKwik, Khatabook, and NAVI, enabling real-time data exchange for user onboarding and financial transactions. Delivered robust APIs and data mapping pipelines, maintaining a less than 1% incident rate and supporting 500K+ transactions/month post-deployment.

Accenture

Oct 2019 – April 2021

Associate Software Engineer

Gurgaon

- **Backend Feature Development:** Introduced, and Refined backend features for key financial modules. Contributed to business logic implementation, RESTful API development, and relational database schema design. Handled high-throughput traffic with less than 100ms average response time.
- **End-to-End Module Ownership:** Took full ownership of specific modules from requirement gathering to production deployment. Established data consistency, system reliability, and adherence to clean architecture principles. Achieved more than 99.9 % uptime for all the modules.
- **Internal Tools & Automation:** Defined and optimized internal tools and automation scripts to support operations, enhance productivity, and reduce manual workload by up to 40%. Used Python, Node.js, and shell scripting to build monitoring utilities, data reconciliation tools, and admin interfaces.

Education

Maharaja Surajmal Institute of Technology

Aug. 2015 – Aug 2019

Bachelor of Technology in Computer Science

New Delhi
