Professional Summary

Backend-focused SDE-2 with 5 years of experience building high-scale fintech infrastructure. Specialize in breaking down monoliths into microservices, designing event-driven systems on AWS, and owning backend platforms that process millions of daily transactions end-to-end. Known for taking real ownership: not just writing code, but making sure systems stay up, stay correct, and keep improving.

Technical Skills

Languages: C, C++, JavaScript, TypeScript, Java, MySQL **Frameworks:** Node.js, SpringBoot, REST API **Cloud & Infra:** AWS (SNS, SQS, Step Functions, API Gateway), Docker **Databases:** MySQL, MongoDB, Redis **Core Concepts:** System Design, Distributed Systems, Microservices, DSA, GIT

Experience

Per Annum

Software Development Engineer - 2 | New Delhi

May 2022 - Present | Fintech lending platform serving 1.5M+ borrowers

- **Microservices Migration:** Broke apart a legacy monolith into 6 TypeScript microservices, cutting deployment time by 40% and making the codebase 60% easier to maintain. Services communicate via internal SDK clients and run in Docker containers.
- **Event-Driven Webhook System:** Built a cross-system sync layer on AWS using SNS, SQS, API Gateway, and Step Functions so admin-level changes reflect in real time across 5+ databases owned by different product teams. Maintained 99.99% uptime with full fault tolerance.
- **Investor Payout Engine:** Designed and shipped a daily transaction engine moving Rs. 5Cr+ through mandate-based bank pulls. Cut payout processing time from 10 hours to 2 hours using SQL partitioning and grew reinvestment efficiency by 35%.
- **Credit Scoring Pipeline:** Set up decoupled SQS workers to fetch CIBIL scores, generate loan agreements, and deliver KFS documents, processing 5,000+ borrower profiles per day at a 99% success rate.
- **Notification Platform:** Built a unified notification service handling email, WhatsApp, and SMS across all company products, 100K+ messages per month. Introduced an async server-worker model backed by MongoDB to keep throughput high under load.
- **Fintech Partner Integrations:** Owned backend integrations with MobiKwik, Khatabook, and NAVI from start to finish, covering API design, data mapping, testing, and go-live. These integrations now carry 500K+ transactions per month with under 1% error rate.
- **Large-Scale Data Correction:** Fixed 700,000+ loan records with zero downtime using async batch jobs and background processing pipelines, while the system stayed fully live throughout.
- **Company Admin Platform:** Sole backend owner from day one. Planned, built, deployed, and maintained the entire admin system independently, handling SLA compliance and 24/7 availability throughout.
- **Core Loan Workflows:** Built backend flows for loan disbursement, foreclosure, cancellation, and repayment for 1.5M+ borrowers. Used Redis-based distributed locking and atomic transactions to guarantee zero race conditions and 100% data consistency.

Career Break

Personal / Family | New Delhi

April 2021 - May 2022

- Took time away to handle a family matter. Used the period to strengthen fundamentals in system design and data structures in preparation for senior backend roles.

Accenture

Associate Software Engineer | Gurgaon

Oct 2019 - April 2021

- **Financial Module Development:** Built and shipped RESTful APIs for key financial modules, handling high-throughput traffic with under 100ms average response time and 99.9%+ uptime across every module I owned.
- **Internal Tooling:** Wrote automation scripts, reconciliation tools, and admin dashboards using Python, Node.js, and shell scripting. Reduced manual operational work by up to 40%.

Education

Maharaja Surajmal Institute of Technology

Bachelor of Technology in Computer Science | New Delhi | Aug 2015 - Aug 2019
